

NARAS

Smart Sprayer Agritech

WITH THE NEW GENERATION, HIGH-TECH SENSORS AND ELECTRONIC EQUIPMENT, YOU CAN INSTANTLY MONITOR THE DETAILED DATA READ THROUGH THE SMART SPRAYER VIA THE TOUCH USER SCREEN, TRACK THE SPRAYED AREAS WITH MAPPING AND EASILY CONTROL THE MACHINE.

The amount of pesticide applied per decare is automatically adjusted precisely with software control with respect to the vehicle speed calculated by the satellite signal. Spraying is automatically started and stopped at the beginning and end of the rows to avoid overlapping pesticide. The amount of pesticide per decare is calculated instantly with the flow meter on the system and is automatically adjusted by the software independently of the speed. Thanks to the sensors on the system, critical data such as pressure and tank level can be monitored via the user screen.
